

POORNIMA K

Software Engineer | Golang Backend Developer

+91 8220133943 poornimakannan73@gmail.com Madurai, Tamil Nadu, India linkedin.com/in/poornima-kannan-2bab7b232

SKILLS

Languages

Golang · Java · Python · Dart

Backend

REST APIs · Microservices ·
Middleware Design

Database

PostgreSQL

DevOps & Tools

Jenkins · Git · SonarQube · Tilt ·
HashiCorp Vault

Infrastructure

Kubernetes (log-level debugging) ·
Amazon ECR

Cloud

AWS (S3, ECR) · Azure

Practices

Unit Testing · Agile/Scrum · CI/CD
Linux · Debugging

Exposure

RabbitMQ

EDUCATION

B.Tech – Information Technology

Velammal College of Engineering &
Technology

Madurai

CGPA: 8.29 / 10 (First Class)

2021 – 2025

STRENGTHS

- ◆ Ownership & Incident Response
- ◆ Problem Solving & Debugging
- ◆ Distributed Systems Interest
- ◆ Scalable Backend Design
- ◆ Fast Learner & Adaptable

PROFILE

Backend Software Engineer with 2+ years of experience building scalable Golang services and REST APIs backed by PostgreSQL, and owning CI/CD infrastructure end to end. Comfortable tracing production incidents through Kubernetes logs, hardening credential and dependency security, and shipping release tooling used across Dev and Production. Strong interest in distributed systems and information retrieval, with hands-on ML experience from an IEEE-published research project.

KEY ENGINEERING CONTRIBUTIONS

◆ Production Incident Ownership

Investigated a Jenkins core-upgrade outage affecting Dev and Production - traced symptoms in deployment logs through Kubernetes to an underlying plugin compatibility conflict, and coordinated recovery under a tight delivery timeline.

◆ Platform & Security Feature Development

Built a HashiCorp Vault-backed credential-uniqueness validator spanning Global, User, and Folder scopes, and shipped a Jenkins license-status banner within two days by integrating directly into the Jenkins distribution.

◆ End-to-End Release Ownership

Own the Jenkins plugin release pipeline end to end - version tagging, CI builds, HPI artifacts, S3/GitHub verification, Update Centre/Nexus validation, and Dev/Production deployment plus CVE identification and remediation in Amazon ECR container images.

WORK EXPERIENCE

AgilityDelivered — Associate Engineer

May 2025 – Present

- ✦ Developed scalable backend APIs in Golang supporting user onboarding and authentication.
- ✦ Designed and integrated RESTful microservices in Golang ensuring reliable communication between mobile and web applications.
- ✦ Worked with PostgreSQL for structured data operations, validation logic, and query optimization.

- ✧ Contributed to unit testing using Go testing frameworks to improve system reliability and maintainability.
- ✧ Worked on Jenkins ecosystem enhancements, including plugin upgrades, dependency management, security vulnerability fixes, and HPI build and deployment workflows.
- ✧ Investigated and resolved complex build, plugin, integration, and production issues across CI/CD and service environments.
- ✧ Drive dependency and security remediation through release, including identifying and validating CVE fixes in Amazon ECR container images.
- ✧ Contributed to improving Jenkins automation through plugin configuration updates, credential handling refinements, and GitHub App-based authentication integration.
- ✧ Collaborated with cross-functional engineering teams to troubleshoot reliability issues, analyzing logs and coordinating fixes across frontend and backend systems.

AgilityDelivered — Software Engineer Intern

Sept 2024 – April 2025

- ✧ Developed backend endpoints based on functional requirements and UI specifications.
- ✧ Assisted in debugging and refining backend services in Linux-based environments.
- ✧ Developed Flutter UI for Android and Web applications from Figma designs, implementing responsive layouts, mobile safe-area handling, screen alignment, and reusable UI components.
- ✧ Built a complete forgot-password and authentication flow in Flutter, covering mobile/email input, OTP verification, new-password and confirm-password screens, form validation, and authentication-aware navigation.
- ✧ Integrated reCAPTCHA v3 with authentication APIs, handling the required authentication token in API request headers and ensuring OTP generation occurred only after successful verification.
- ✧ Developed and integrated a web-based support portal for organization onboarding, support-team creation, and bulk member registration, connecting the Flutter mobile application and web application through APIs.
- ✧ Integrated real-time chat APIs between the Flutter mobile application and web support portal, ensuring reliable communication and consistent user workflows across platforms.

RESEARCH PROJECT

Precision Agriculture Advisor Platform IEEE Published — ICSES 2024

- ✧ Built an end-to-end system using real-time sensor data for soil analysis and crop recommendation.
- ✧ Developed machine learning models (CatBoost, MLP) achieving up to 94% accuracy.
- ✧ Designed backend services and integrated data pipelines for processing and prediction.
- ✧ Implemented real-time data ingestion and visualization using cloud platforms.
- ✧ Published research at IEEE conference (ICSES 2024).
