

POORNIMA K

Software Engineer | Full Stack Developer | Golang & Flutter

+91 8220133943 poornimakannan73@gmail.com Madurai, India
[linkedin.com/in/poornima-kannan-2bab7b232](https://www.linkedin.com/in/poornima-kannan-2bab7b232)

SKILLS

Languages

Golang · Java · Python · Dart · JavaScript

Backend

REST APIs · Firebase · Cloud Firestore · Microservices · Middleware Design

Frontend

Flutter · HTML5 · CSS · JavaScript · FlutterFlow

Database

PostgreSQL

DevOps & Tools

Jenkins · Git · SonarQube · Tilt

Cloud

AWS (S3) · Azure

Practices

Unit Testing · Agile · CI/CD
Linux · Debugging

Exposure

RabbitMQ

EDUCATION

B.Tech – Information Technology

Velammal College of Engineering & Technology
Madurai

CGPA: 8.29 / 10 (First Class)
2021 – 2025

STRENGTHS

- ◆ Problem Solving & Debugging
- ◆ Distributed Systems Interest
- ◆ Scalable Backend Design
- ◆ Fast Learner & Adaptable

PROFILE

Software Engineer with over two years of hands-on experience building backend services and cross-platform applications using Golang, Flutter, and Dart. Skilled in developing REST APIs, responsive web and mobile interfaces, authentication workflows, cloud-backed applications, and CI/CD systems. Experienced in debugging production issues, integrating frontend and backend services, and building secure, maintainable applications. Strong foundation in software engineering, system reliability, and real-time data processing.

WORK EXPERIENCE

AgilityDelivered — Associate Engineer

May 2025 – Present

- ✦ Developed scalable backend APIs in Golang supporting user onboarding and authentication.
- ✦ Designed and integrated RESTful microservices in Golang ensuring reliable communication between mobile and web applications.
- ✦ Worked with PostgreSQL for structured data operations, validation logic, and query optimization.
- ✦ Contributed to unit testing using Go testing frameworks to improve system reliability and maintainability.
- ✦ Worked on Jenkins ecosystem enhancements, including plugin upgrades, dependency management, security vulnerability fixes, and HPI build and deployment workflows.
- ✦ Investigated and resolved complex build, plugin, integration, and production issues across CI/CD and service environments.
- ✦ Contributed to improving Jenkins automation through plugin configuration updates, credential handling refinements, and GitHub App-based authentication integration.
- ✦ Collaborated with cross-functional engineering teams to troubleshoot reliability issues, analyzing logs and coordinating fixes across frontend and backend systems.
- ✦ Continued cross-platform Flutter development, delivering mobile and Web application workflows, integrating frontend screens with backend APIs, and supporting authentication, onboarding, authorization, and real-time communication features.
- ✦ Worked across frontend and backend layers to integrate Flutter applications with Golang services and APIs, troubleshooting integration issues, validating end-to-end workflows, and ensuring consistent behavior across Android and Web.

- ✗ Developed backend endpoints based on functional requirements and UI specifications.
- ✗ Assisted in debugging and refining backend services in Linux-based environments.
- ✗ Developed Flutter UI for Android and Web applications from Figma designs, implementing responsive layouts, mobile safe-area handling, screen alignment, and reusable UI components.
- ✗ Built a complete forgot-password and authentication flow in Flutter, covering mobile/email input, OTP verification, new-password and confirm-password screens, form validation, and authentication-aware navigation.
- ✗ Integrated reCAPTCHA v3 with authentication APIs, handling the required authentication token in API request headers and ensuring OTP generation occurred only after successful verification.
- ✗ Integrated Flutter frontend screens with REST APIs and backend services, handling API requests, authenticated headers, responses, error states, and end-to-end navigation across authentication workflows.
- ✗ Developed and integrated a web-based support portal for organization onboarding, support-team creation, and bulk member registration, connecting the Flutter mobile application and web application through APIs.
- ✗ Integrated real-time chat APIs between the Flutter mobile application and web support portal, ensuring reliable communication and consistent user workflows across platforms.

RESEARCH PROJECT

Precision Agriculture Advisor Platform IEEE Published — ICSES 2024

- ✗ Built an end-to-end system using real-time sensor data for soil analysis and crop recommendation.
- ✗ Developed machine learning models (CatBoost, MLP) achieving up to 94% accuracy.
- ✗ Designed backend services and integrated data pipelines for processing and prediction.
- ✗ Implemented real-time data ingestion and visualization using cloud platforms.
- ✗ Published research at IEEE conference (ICSES 2024).

PERSONAL PROJECT

Vouch: Cross-Platform Reliability Verification Platform

Flutter · Dart · Firebase · Riverpod · GoRouter

- ✗ Developed and deployed a Flutter + Dart application using a single codebase for Android and Web, with the Android APK published through GitHub Releases.
- ✗ Implemented Riverpod state management, GoRouter navigation with real web URLs, authentication-based redirects, and responsive role-based UI across mobile and desktop web.
- ✗ Built backend functionality using Firebase Authentication and Cloud Firestore, with security rules enforcing authorization and data access server-side.
- ✗ Implemented two-way ratings and reliability scores for workers and clients, verified job-history workflows, worker discovery, and public shareable profiles.
- ✗ Designed privacy-focused and server-enforced workflows, including role-based access control, privacy-preserving user data, and a 5-minute evidence lock after job completion.
